isbn:9789048127979

This volume provides an overview of recent advances in the ecology of various kinds of non-forested ecosystems (grasslands, deserts, and wetlands) on a variety of topics,

including species diversity and the factors that control species diversity, impacts of disturbances (grazing, mowing, fire, flooding), establishment and reproduction ecology, and plant-plant interactions. It was previously published in "Plant Ecology", Volume 201, Number 2, 2009.
