The world has not always loved dragons, but dragons have always loved the world. They love the simple beauty of nature's fleeting flowers, the armor left behind by

knights who come to slay but end up playing with them. They love the birds with whom they share the skies, and they love books that entrance them. Often cast as villains associated with destruction, in this enchanting picture book dragons are depicted as great spirits and protectors of the natural world, ancient beings in touch with the beauty and rhythms of the earth. Collage art of dragons compiled from the things they love fill every page of this book, which is sure to spark young imaginations.
