Boosted by the success of Foam Gliders, Chicken Socks returns to the skies — and this time we’re shooting for the stars. We’re aiming so high, in fact, we had to come up a brand new way to fly. Introducing Foam Rockets! Simply choose a rocket body design and punch it out. Following the simple, step-by-step instructions, fold the body and slide it onto a foam fuselage. Now you’re ready for blast-off: Stick the finished rocket onto the air bulb launcher and give a squeeze. ZOOM! To the moon! With three colors of foam fuselages and six rocket styles, the range of custom design options is totally cosmic. Plus, junior rocketeers can make their own space helmets using easy-to-find materials from Planet Home, and decorate them with the cool punch-out knobs,

buttons, and thing-a-majigs included in the book. It’s enough to send any kid into orbit.
