This is a full-color atlas, complete with DVD, that teaches the techniques of cataract surgery! This lavishly-illustrated text presents all aspects of present day cataract

surgery with photographic and diagrammatic illustrations. It deals with various aspects of SICS and phacoemulsification and provides a brief description about preoperative evaluation, operating room set-up, practical tips about the phacoemulsifier and the techniques of nucleus management in phacoemulsification. It also deals with cataract surgery in typically special situations and the management of complications arising from them. A DVD contains numerous surgical video clips.
