An introduction to geometry without measurements. Since the earliest times, mankind has employed the simple geometric forms of straight line and circle, in art, architecture, and mathematics. Originally marked out by eye and later using a stretched cord, in time these came to be made with the simple tools of ruler and compass. This valuable reference book introduces the origins and principles of

geometry using these basic tools, and shows some of the geometric constructions used by artists, architects, and mathematicians of old.

作者介绍:

Andrew Sutton is a high school mathematics teacher. He has taught in London and New York, and has a special interest in mathematics in art.
