What are the challenges involved in protecting biodiversity in tropical terrestrial and coastal ecosystems? What practical lessons can be learned from conservation projects? And what are the procedures and attitudes of governments, NGOs, donor agencies, development banks and consulting firms? These key questions are all answered, drawing on the author's extensive experience of conservation projects in Malaysia, Nigeria, China, Indonesia, the Philippines and Costa Rica. Project descriptions illustrate two important themes in conservation: increasing the awareness of the economic value of biodiversity among decision makers and enabling and encouraging local people to participate in designing and implementing projects. The book sets out guidelines to help others design projects that are practical and effective, yet more complete and more robust than some of those designed in the recent past.
