Science tries to understand human action from two perspectives, the cognitive and the volitional. The volitional approach, in contrast to the more dominant "outside-in" studies of cognition, looks at actions from the inside out, examining how actions are

formed and informed by internal conditions. In Disorders of Volition, scholars from a range of disciplines seek to advance our understanding of the processes supporting voluntary action by addressing conditions in which the will is impaired. Philosophers, psychologists, neuroscientists, and psychiatrists examine the will and its pathologies from both theoretical and empirical perspectives, offering a conceptual overview and discussing specific neurological and psychiatric conditions as disorders of volition. After presenting different conceptual frameworks that identify agency, decision making, and goal pursuit as central components of volition, the book examines how impairments in these and other aspects of volition manifest themselves in schizophrenia, depression, prefrontal lobe damage, and substance abuse. Contributors: George Ainslie, Tim Bayne, Antoine Bechara, Paul W. Burgess, Anna-Lisa Cohen, Daniel Dennett, Stephanie Dubal, Philippe Fossati, Chris Frith, Sam J. Gilbert, Peter Gollwitzer, Jordan Grafman, Patrick Haggard, Jay G. Hull, Marc Jeannerod, Roland Jouvent, Frank Krueger, Neil Levy, Peter F. Liddle, Kristen L. Mackiewicz, Thomas Metzinger, Jack B. Nitschke, Jiro Okuda, Adrian M. Owen, Chris Parry, Wolfgang Prinz, Joelle Proust, Michael A. Sayette, Werner X. Schneider, Natalie Sebanz, Jon S. Simons, Laurie B. Slone, Sean A. Spence
