isbn:9780764332593

Dinosaurs were not the only “players” on the earth during the Triassic and Jurassic geologic periods, a fact quickly proven with 415 impressive colour photos of fossilised plant, animal, and avian life from that distant past!

The detailed text of Mesozoic Fossils provides a wonderful overview of the range of Mesozoic period fossils by period found around the globe, discusses the ever evolving field of fossil collecting, and explores fossils represented at nineteenth and twentieth century worlds fairs. Anyone with a passion for fossil collecting, paleontology, and the Earth of our distant past will treasure this authoritative volume.
