Breathtaking wildlife illustrations and imaginative use of gatefolds make for an enchanting look into the sprawling life of a forest's ecosystem, first by day then at night.

This beautifully illustrated new title for kids 7-10 explores the forest and all the daytime and nocturnal activities of the animals that inhabit it. The book features stunning illustrations of wild animals in their forest habitat during the day, followed by a section showing the different set of animals that inhabit the same scene at night.

Each day-night section has an introduction explaining the unique characteristics of the forest habitat and how the various creatures thrive within it. Each species is then featured individually in the pages following the gatefolds. Kids will be enriched and entertained for hours as they are pulled into the enchanting world of the wild.
