Incredible wildlife illustrations and imaginative use of gatefolds make for an exciting look into the sprawling life of a swamp's ecosystem, first by day then at night.

This beautifully illustrated new title for kids 7-10 explores a swamp and all the daytime and nocturnal activities of the animals that inhabit it. The book features two stunning, panoramic illustrations of intriguing animals that inhabit the swamp, first during the day and then a different group of animals at night. Each day-night section has an introduction explaining the unique characteristics of the swampland and how the various creatures thrive within it. Each species is then featured individually in the pages following the gatefolds. Kids will be entertained and educated as they search the swamps for wildlife.
