This title is the first in the Critical Perspectives on the World Economy series. With a new introduction by the editors it brings together the most significant contributions on privatization including material on the philosophical and historical context. Specific subjects covered include * regulation and competition policy * different forms and techniques of privatization * the impact of privatization. Drawing on an enormous range of sources, the collection includes material by Hayek, Harold Demsetz, Douglass North, Janos Kornai, Jean Tirole and Jeffrey Sachs. It will be an indispensable reference for policy makers, as well as academics concerned with economic policy and public economics.
