In this insightful book, Shinichi Shigetomi and Kumiko Makino focus on the impact of contextual factors on social movements in the developing world, pushing major existing theories beyond their traditional focus. With wide coverage of the developing world, leading academics explore a variety of forms and mechanisms of social movement. They present discussions on resource and institutional endowment for mobilization in Colombia and Thailand, and explore the structure behind political

opportunities in Argentina, China and South Africa. The history and reality of identity-making in India, Mexico and Nigeria are also examined. Presenting novel analytical frameworks to study social movements in developing countries, this book will be warmly welcomed by academics and researchers with an interest in sociology, development and political science. It will also strongly appeal to social movement activists.
