Every day, oncology nurses see patients who experience multiple symptoms, some related to cancer, some related to treatments, others non-cancer related. To effectively treat what nurses might find at the bedside, they need information they can trust.

Guide to Oncology Symptom Management provides nurses with the coverage of symptoms and conditions that they need. From symptoms found in older adults to common symptoms such as chemotherapy-induced nausea and vomiting, cancer-related fatigue, and oral mucositis, this new book offers a complete overview of common symptoms and problems that affect patients with cancer.
