Chinese will catch up with English and together, they will become the dominant business language in our world. This book is for those who has a forward vision interested in giving their children a headstart in learning Chinese for the 21st Century. Right brain methods can let your child learn in a fun, effective and effective way if you start early (from 4 months). The book gives unique insights to what is being missed or misconceived by educators around the world. The author's knowledge of right brain learning has allowed him to decode the path to learning Chinese in a way different than many teachers now propose which, a way which is discouraging and painful. The author says: "Chinese is a pictorial language and should be learned using a pictorial system of tuition. Using phonetic methods to teach actually misguides the child and slows them down.
