This fully revised 2nd Edition of Keith Moss's highly respected text gives comprehensive coverage of the design of heating and water services in buildings. Each chapter starts

with the information needed to understand the specific area, and this is then reinforced by many examples and case studies with worked solutions. Mathematics and the principles of fluids are introduced as core skills where they are required as part of the design solution. New material is provided on chimneys, fossil fuel combustion, electrical heating and group and district heating. Students, whether on HNC, HND and degree courses, will find this is a book they need to have.
