This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science. The ontological issues are discussed from a hermeneutico-phenomenological point of view. In addition, the book contains critical discussions of basic themes raised by Carnap, Hempel, Stegmuller, Kuhn, Lakatos, Hubner, Popper, van Fraassen, Heelan and Kisiel. One of the basic theses developed in the book is that logical, epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth. The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences.
