isbn:9780631196792

In this important new work, Haack develops an original theory of empirical evidence or justification, and argues its appropriateness to the goals of inquiry. In so doing, Haack provides detailed critical case studies of Lewis's foundationalism; Davidson's and Bonjour's coherentism; Popper's a epistemology without a knowing subjecta ; Quine's naturalism; Goldman's reliabilism; and Rorty's, Stich's, and the Churchland's recent obituaries of epistemology.
