isbn:9780387142555

This CD-ROM contains "The Physical Review: The First Hundred Years". Version 2.0 contains the same content as the original CD issued in 1995 (only available then packed with the book). It has been upgraded to exploit new technology and to maintain accessibility of the content to users. The upgraded CD allows browsing by author, keyword, title and year of publication. The new CD-ROM is also bound into reprinted copies of "The Physical Review: The First Hundred Years". The CD-ROM contains more than 1000 original papers (the equivalent of more than 7400 pages of text) from the first century of publication of "The Physical Review" (1893-1993) and "Physical Letters" (1961-1993). Along with celebrated works by luminaries such as Einstein, Bohr and Feynman, this collection includes a selection of important critical research. The papers are divided into 12 chapters, corresponding to the major subfields of physics. Each chapter is introduced by an eminent physicist who offers a concise summary of past developments and future trends.
