'A must for the qualitative researcher whose work primarily lies in the field of healthcare' - Forum for Qualitative Social Research - follow the link below to read the complete review This completely revised and greatly expanded edition of Doing Qualitative Research spans the spectrum of primary care research, illustrating when methods are appropriate and how to use them. New to this edition are: additional collection methods; a new section on analysis and interpretation; more emphasis on participatory strategies; and suggestions for evaluating quality and enhancing reflexivity incorporated throughout the text. Each chapter is written by a gifted researcher who: defines their topic and the context of their research; defines key themes and processes; provides examples; explores theory; and shares their excitement of discovery. The book is richly illustrated throughout with detailed examples.
