This book provides in-depth coverage of all aspects of designing, developing and manufacturing products using gas-assist Injection molding technology. It compares gas-assist injection molding to other possible manufacturing technologies and also covers the underlying design principles, tooling details and manufacturing considerations. The reader will gain an understanding of how to identify the version of this technology best suited to a specific application, as well as the design and tooling detail required to optimize cost and performance. The chapter on manufacturing will provide guidance on the pitfalls of implementing this technology. The reader will find further useful information in a variety of case studies that provide real-life examples of the use and value achievable.
