The increasing emphasis on early career education has teachers and librarians looking for innovative resources for children. With this in mind, a valuable series has been created specifically for grades 5 and up. Discovering Careers for Your Future links curriculum to careers, helping elementary and middle school students investigate the subjects they're interested in and the careers those subjects might lead to. Encourage children to explore their interests and stimulate their curiosity with this fun and informative series. The books are filled with accurate, up-to-date career information. Each book features 20 careers, and each career article includes job descriptions, salary ranges, job outlook, educational requirements and where to look for more information. Also featured are eye-catching sidebars that cover a variety of topics, including ways to explore areas of interest, profiles of famous people, related jobs, and interesting facts.
