isbn:9780415402637

One of the most ambitious sets to be published in dermatology for some years, these comprehensive guides to dermatologic conditions, classified by physical findings, are

referenced to current literature. There are 284 entries, arranged alphabetically. The art and science of clinical dermatology rest with the ability of the clinician to formulate an appropriate differential diagnosis by defining and synthesizing the physical findings; this book serves as a guide in that quest, and will be both educational and stimulating to dermatologists at all levels of training and practice. Readers who use this Text in conjunction with the separate Atlas of clinical photographs will be able to fine-tune their organizational thought processes at the same time as their visual diagnostic skills in an instructive and enjoyable intellectual and clinical exercise. This unique high-quality road map through clinical dermatology should form part of the core library of every practicing dermatologist.
