The existence of international law, with its rights, rules and regulations is futile without an effective enforcement mechanism that provides a sufficient and adequate remedy. International space law is particularly significant in the evolution of international dispute settlement because it involves a consideration of issues from an international and interdisciplinary perspective. These issues range from policies of regional and international organizations; to juridical dispute settlement and global governance; to fiscal entrepreneurship and business efficacy; and to scientific breakthroughs and technological advances. In this context, this book looks at an international and interdisciplinary approach in dealing with dispute resolution in space activities. It proposes a workable legal framework for dispute resolution in outer space, together with a mechanism for enforcement and verification.
