Written by world-renowned authorities in ocular oncology at the Wills Eye Institute, this text/atlas is a complete pictorial and textual guide to the clinical features, pathology,

diagnosis, and management of eyelid, conjunctival, and orbital tumors and pseudotumors. It features 2,532 photographs and surgical drawings—2,137 in full color—that depict the clinical variations, histopathologic characteristics, and treatment of all neoplasms and related lesions. This thoroughly updated edition combines the content of Atlas of Eyelid and Conjunctival Tumors and Atlas of Orbital Tumors and contains over 50 percent new material. Each entity is presented in an easy-to-follow format: a concise description with references on the left-hand page and six illustrations on the right-hand page. The photographs show in precise detail the gross and microscopic features that distinguish each type of lesion. Professional drawings and intraoperative photographs demonstrate key surgical principles and procedures. A companion volume, Intraocular Tumors: An Atlas and Text, Second Edition, is also available. You can order the two books separately, or save 15% by ordering them together as a set.
