Social Work Research Methods is a stand alone "how-to" social research text that covers conceptualization, design, implementation, data management, and statistical analysis with comprehensively detailed examples. It provides students with everything they need to learn about social science research, and how to complete a research project from start to finish. In addition, the text's research process is covered sequentially, in a straightforward "how-to" format. It discusses values and ethics, conceptualization, design, familiarization with key computer programs (Microsoft Excel, SAS, SPSS and NVIVO), analyses, implementation and dissemination. It is also written in a tone that is intentionally light-hearted to increase student interest and comfort level by addressing often overlooked aspects of conducting research (e.g. data management, IRB clearance, and grant development) in detail. Key highlights of the text include five example research projects. These example projects are presented in their entirety; including how the researchers chose their areas of interest, how they executed their literature reviews (annotated citation lists are given), and how they designed, implemented, and disseminated (poster, article, agency report, or PowerPoint presentation) their work.
