There is now greater detail on electronics and their application in the motor vehicle, including electrical energy management (EEM) and discusses the topic of inter-system networking within the vehicle. It also includes a description of the concept of hybrid drive – a topic that is particularly current due to its ability to reduce fuel consumption and therefore CO<sub>2</sub> emissions This book will benefit automotive engineers and design engineers, automotive technicians in training and mechanics and technicians in garages. It may also be of interest to teachers/ lecturers and students at vocational colleges, and enthusiasts.
