This title is directed primarily towards health care professionals outside of the United States. It is a research-based guide to nursing in this field. The book covers all stages of chronic kidney disease; haemodialysis and peritoneal dialysis; transplantation; investigations; nutrition; and renal care in infancy, childhood and early adolescence. The underlying anatomy, physiology and psychology are discussed in depth, along with the skills and knowledge required to provide support, treatment and high quality care.

Comprehensive, up-to-date text which provides all that nurses need to know about renal care Evidence-based content ensures best practice is used throughout Learning outcomes and chapter summaries help to consolidate understanding Case studies help readers to relate theory to practice

Content updated to reflect changes in policies, care and management Prevention of kidney disease New chapter on end-of-life care Updated references to reflect recent research evidence
