* The entire human body, as well as major organs and structures are presented in a 3-D format, and can be rotated to view the image from multiple anatomical perspectives. * Users can dissect through up to 44 layers of the body to discover the relationships of the structures to the whole. * A built in "zoom" feature allows users the ability to get a close-up look at detail, imitating actually being in a lab. * Histology is closely linked to the gross anatomy, providing a better understanding of the links between form and

function * "Snapshots" of any image - with or without labels, zoomed in for detail, or at any layer or perspective - can be saved as a jpeg for use in PowerPoint lectures, quizzes or handouts. * Easy and intuitive tools make it easy to navigate or search through the program to find just the image or perspective desired for study. * Audio pronunciation of all labeled structures provides help in learning the language of anatomy and remembering of terminology. * Includes practice exams with multiple modes for both reviewing and testing. * Student Worksheets are available with activities and resources for integrating the software into your course for a meaningful learning experience.
