How To Make A Noise-perhaps the most widely read book about synthesizer programming-is a comprehensive, practical guide to sound design and synthesizer programming techniques using subtractive (analog) synthesis, frequency modulation synthesis, additive synthesis, wave-sequencing, and sample-based synthesis. The book looks at programming using examples from six software synthesizers: Cameleon 5000

from Camel Audio, Rhino 2 from BigTick, Surge from Vember Audio, Vanguard from reFX, Wusikstation from Wusik dot com, and Z3TA+ from Cakewalk. Simon Cann is a musician and writer based in London. He is author of Cakewalk Synthesizers: From Presets to Power User, Building a Successful 21st Century Music Career, and Sample This (with Klaus P Rausch). You can contact Simon through his website: www.noisesculpture.com.
