Drawing on their years of classroom experience working with struggling students and their teachers, Dr. Brad Witzel and Dr. Paul Riccomini present elementary and middle school teachers with practical strategies and activities for promoting academic success

and mastery of key mathematical concepts. They offer insight into what really helps students learn math including friendly descriptions of the concrete to representational to abstract sequence of instruction, procedural instruction that can be expanded from one topic to the next, assessment guides for placement and measurement, and retention of content through mixed reviews and assessments. In addition, the authors provide teachers with clear direction to implement each research-based lesson plan with answer sheets to grade student work as well as pictures of manipulations and accompanying vocabulary so that teachers know exactly how to show concrete and pictorial steps. Give your students who struggle with fractions the support they need! * Aligns each lesson to the CRA instruction sequence and effectively leads teachers through classroom instruction. * Offers step-by-step direction to coach teachers through each lesson plan. * Includes a complete list of manipulative resources for each lesson.
