Addressing the concepts behind participatory monitoring and learning (PMandL), such as collaborative review and problem solving through the generation and use of

information on a regular basis, this reference focuses on how this system leads to corrective action and improvement within a project, based on shared decision making from a number of stakeholders. Offering field-tested techniques from an initiative that experimented with PMandL within three World Bank-assisted rural development areas, this resource provides facilitators with practical information on how to prepare and apply these tools, as well as how to present the results.
