This book extends the focus to all the entities that participate in the successful quest for safety and demonstrates how Design, Manufacturing, Maintenance, (inspection), Operation, Requirements, (regulations) all are part of successful, safe innovation, and necessary to assure Safe flight thru the life of the vehicle. It addresses the notion that safety is a function of time and a vigilant risk management is only successful, if it includes all participating entities.

It is a companion to the author's first volume Composite Structure: Design, Safety and Innovation, published by Elsevier in June 2005.

The book

- eliminates an unacceptable 'gap' in the world of safety
- represents a 'new' approach to designing, manufacturing, maintaining, operating and regulating composite airplane structures
- for professionals in the aerospace structural development arena whether in industry, academia or government
