The combination of economic growth, improved standard of living, and urbanization has led to exponential growth in travel demand and related transportation investment in China during the past two decades. Plan, Build, and Manage Transportation Infrastructure in China contains 85 papers that were presented at the Seventh International Conference of Chinese Transportation Professionals (ICCTP), held in Shanghai, China in May 2007. The three main topics of these papers are: Transportation Planning and Policy, Traffic Operation and Safety, and Infrastructure/Pavement. This proceedings focuses on critical issues associated with planning, building, and managing the transportation infrastructure in China. It will be beneficial to transportation engineers and professionals.
