This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty.

A new page size allows the presentation of the 12-lead ECGs across a single page for clarity. Many of the new cases incorporate a selection of chest X-rays illustrating the different appearances that are associated with various cardiac conditions.
