Written by a seasoned environmental litigator, Environmental Litigation Case Strategies tells the story of an almost ten year dispute over environmental cleanup costs. Told by the lead trial attorney for a small family-owned biochemical company, this comprehensive narrative takes the reader through the entire lawsuit from the commencement of the action to a favorable verdict at the conclusion of the trial. Additionally, the author provides an analysis of the key considerations when building the defense strategy and describes the process of evaluating all angles of the case, a method that can be applied during any discovery and evidence-gathering period. The book also includes the defendants post-trial submission as an appendix, which serves as an excellent reference. Environmental Litigation Case Strategies is an easy read for the environmental litigator seeking defense strategies for the future.
