Listening to the Rhino uses stories, myths, and case studies to show the living reality of something deep in the psyche that resembles a large, primordial animal, a creature whose support of human agendas is not entirely reliable. This irrational part of ourselves - call it the autonomous psyche - finds expression in a multitude of contradictory ways in both the lives of individuals and the sweep of world events. Sometimes it is responsible for the miraculous healing of body and soul; at other times it perpetuates the most horrifying forms of violence. Whether it works primarily for good or for ill depends in large part on how we relate to it.
