The conference Chaos in Astronomy was held in Athens on 17-20 Sept. 2007. International leaders in the field addressed the topics - Chaos in large N-body systems and in galactic dynamics, - Chaos in solar system dynamics, - Statistical mechanics of systems with regular and chaotic orbits, - Chaos in the formation of large-scale structure in the Universe, - Fundamental concepts, methods and tools. The book contains carefully edited refereed contributions. It serves as a reference to researchers and will give an overview to students and newcomers entering any field of dynamical astronomy.
