This edited volume places Jewish-Latin Americans within the context of Latin American and ethnic studies. It departs from traditional scholarship that segregates Jews as inhabitants "in" Latin America republics rather than as citizens "of" Latin American republics. The essays draw examples primarily from Argentina and Brazil, the two South American countries with the largest Jewish populations, and span from the late nineteenth century into the 1990s. By giving primacy to the national identity of Jewish-Latin Americans, the essays included here emphasize human actors and accounts of lived experiences. Lesser and Rein's thought-provoking introduction outlines seven new formulations of the relationship between Jews, the nation-state, and their Diasporic experience. Individual contributors then pursue new perspectives of the Jewish experience, including those of the working class, labor organizing and anarchist activities, women, and the reconceptualization of racism and anti-Semitism."Contributors: "Edna Aizenberg, Marymount Manhattan College of New YorkJudah M.
