"Annual Reports in Computational Chemistry" is a new periodical providing timely and critical reviews of important topics in computational chemistry as applied to all chemical disciplines. Topics covered include quantum chemistry, molecular mechanics, force fields, chemical education, and applications in academic and industrial settings. Each volume is organized into (thematic) sections with contributions written by experts. Focusing on the most recent literature and advances in the field, each article covers a specific topic of importance to computational chemists."Annual Reports in Computational Chemistry" is a 'must' for researchers and students wishing to stay up-to-date on current developments in computational chemistry. This title offers broad coverage of computational chemistry and up-to-date information. Topics covered include bioinformatics, drug discovery, protein NMR, simulation methodologies, and applications in academic and industrial settings. In this title, each chapter reviews the most recent literature on a specific topic of interest to computational chemists.
