The main theme of the book is sustainable disease management in a European context. Some of the questions addressed are: how does society benefit from plant pathology research; how can new molecular approaches solve relevant problems in disease management; what other fields can we exploit in plant pathology research; what challenges are associated with free trade across the new borders; how can we contribute to solving problems of developing countries; how does plant pathology contribute to food quality and safety; and, how does globalization/internationalization affect teaching and extension in plant pathology.
