This book is designed to review all aspects of the science of modern combat sports and provides a reference to physicians who encounter these patients in their practice. The scope of this title is broad and includes study of the psychology, nutrition, biomechanics and injuries (including head trauma, orthopedic, dermatologic). Moreover the authors will provide extensive details about assessment of athletes prior to participation, preventing injury and rehabilitating injured athletes. This text is designed as a practical reference resource and will be of interest to sports medicine physicians, orthopedic specialists, emergency medicine physicians, intensivists and neurologists.
