This book, the proceedings of a Falk Workshop on 'Topical Steroids in Gastroenterology and Hepatology', held in Berlin, Germany, on 14 June 2003, critically discusses the current role of budesonide in gastroenterology, hepatology, surgery and oncology and focuses especially on potential new indications for the use of budesonide. A number of smaller clinical studies and anecdotal case reports with impressive clinical effects are reported in patients with gastrointestinal, hepatic, oncological and surgical problems. In addition, the use of budesonide for the treatment of distal ulcerative colitis and ileocolonic Crohn's disease is evaluated with respect to its role in an evidence-based management of IBD. Finally, as clinical experience with the use of budesonide is increasing, safety issues and the side-effect profile of budesonide is addressed.
