For courses in Windows NT and Windows 2000 Programming. A must have resource for any programming student developing application for the Windows platform. The Windows NT/2000 Native API Reference provides the first comprehensive look at the undocumented services that are part of the native API set. A unique tool for software developers, this reference includes documentation of more than 200 routines included in the native API; detailed description of routines that are either not directly accessible via the Win32 API, or that offer substantial additional functionality; example library routines and utility programs demonstrating the functionality of particular routines; and coverage of kernel architecture supporting the debugging of user mode applications.
