Many of us dream of living by the sea, but how to tackle the sometimes tricky planting conditions that coastal gardening demands? This inspirational and practical book explains how to design, plan and plant up your garden by the sea, making the most of the coastal microclimate. An exposed situation, extremes of weather, soil type and salty air can be difficult to deal with. Learn how to design and choose the right plants that will thrive, whether it is for a windswept, sheltered, container, productive or tropical or exotic-looking garden.
