This work is an update for PatientWise Version 2, a systematic, comprehensive collection of descriptive, single sheet summaries of some 300 common disorders, medical investigations and surgical procedures. Each one is presented on a single A4 sheet for reproduction either by photocopying from the looseleaf file or by printing from the disc-based version. Sheets are grouped into chapters by subject area; Version 2 contains one third more information than Version 1, with one third of PatientWise's original information updated; simple line diagrams have now been included in selected chapters; and self-help groups have been updated and provided on sticky labels at the back of the looseleaf or in a separate file in the software version.
