isbn:9780907845546

This book views Green's philosophical opus through his public life and political commitments. It demonstrates how his main ethical and political conceptions -- his idea of 'self realisation' and his theory of individuality within community -- were informed by evangelical theology, popular Protestantism and an idea of the English national consciousness as formed by religious conflict. While the significance of Kant and Hegel is acknowledged, it is argued that 'indigenous' qualities of Green's teachings resonated with Victorian Liberal values.
