The year is 2016 and for the first time in history humanity is united under a one-world government-The New World Technocracy. The Technocracy's rise to power is made possible by its vow to protect the world from an increase in terrorist attacks that have wreaked havoc throughout the globe. Little does society know that the Technocracy itself is responsible for the attacks, as they blame the Islamic terrorists in an effort to offer protection from them, and gain the people's support. Soon the world learns that the price for this protection is their very freedom. Intoxicated with their newly acquired power, the secular government makes it their first order of business to silence Dr. Lachlan Daulton, founder of the infamous and influential Prayer Movement. Lachlan vows to resist the Technocracy and employs the help of his son, Gene Daulton-a young man with mysterious abilities that the new government yearns to mold to their image. Ocean of Storms tells the story of Gene and the lives he touches, as he makes this grueling and epic journey. Little does Gene know that the world is watching, and its fate rests upon his shoulders.
