著者:Peter Calthorpe

出版者:Island Press

出版时间:2010-12-20

装帧:Hardcover

isbn:9781597267205

From the beginning of his career, Peter Calthorpe has been a leading innovator in

sustainable building projects, sustainable development, and walkable communities. A leader in the New Urbanism Movement, he is an important resource for solutions to current problems of urban sprawl, suburban isolation, and the related problems of outsized energy consumption and an outsized share of world emissions. According to 'Ecological Urbanism', relentless and thoughtless development have created a way of living that brings us to a point of reckoning regarding energy, climate change and the way we shape our communities. The answer to these crises is 'Sustainable Development', a thoughtful combination of good Urbanism with renewable energy sources, state of the art conservation techniques, new green technologies, and integrated services and utilities. 'Sustainable Urbanism', the most recent result of Calthorpe's forward thinking, provides all the inherent benefits of Urbanism amplified by a new generation of ecological design, smart grids, climate responsive buildings, electric cars, and next-generation transit systems. This clearly written (and clearly provocative) work emerges from Calthorpe's belief that, just as the last fifty years have produced massive changes in our culture, economy and environment, the next fifty will generate changes of an even more profound nature. The book, enhanced by its superb graphic design, is an exploration of the challenges and potential shifts in each of these arenas, and how they can affect the future of our communities.

## 书评

新城市主义代表人物Peter的新作。

该书把新城市主义放在气候变化的大背景下，提出“*In fact, responding to climate change and our coming energy challenge without a more sustainable form of urbanism will be impossible*”。书中论述的新城市主义的主要规划方法包括：地...
