"The Birdlife of Florida "compiles the life work of the foremost authority on Florida's

birds, Henry M. Stevenson. For the last six years of his life, Stevenson worked with coauthor Bruce Anderson to complete this incomparable legacy, a reference of 665 detailed species accounts of all the state's avifauna, including the exotics. For each of the species accounts, "Birdlife "contains sections on world distribution and Florida status and, if appropriate, migration, breeding, Christmas Bird Count data, and haunts and habits. Other sections in some accounts include problems of identification, adverse factors, and variations (subspecies).
