著者:William H. Dutton (Editor)

出版者:MIT Press

出版时间:2010

装帧:Paperback

isbn:9780262513739

Advances in information and communication technology are transforming the way scholarly research is conducted across all disciplines. The use of increasingly powerful and versatile computer-based and networked systems promises to change research

activity as profoundly as the mobile phone, the Internet, and email have changed everyday life. This book offers a comprehensive and accessible view of the use of these new approaches--called "e-Research"--and their ethical, legal, and institutional implications. The contributors, leading scholars from a range of disciplines, focus on how e-Research is reshaping not only how research is done but also, and more important, its outcomes. By anchoring their discussion in specific examples and case studies, they identify and analyze a promising set of practical developments and results associated with e-Research innovations. The contributors, who include Geoffrey Bowker, Christine Borgman, Paul Edwards, Tim Berners-Lee, and Hal Abelson, explain why and how e-Research activity can reconfigure access to networks of information, expertise, and experience, changing what researchers observe, with whom they collaborate, how they share information, what methods they use to report their findings, and what knowledge is required to do this. They discuss both the means of e-Research (new research-centered computational networks) and its purpose (to improve the quality of world-wide research). William H. Dutton is Director of the Oxford Internet Institute, Professor of Internet Studies, and Professorial Fellow of Balliol College at the University of Oxford. Paul W. Jeffreys, formerly Director of the Oxford e-Research Centre, is Director of IT at the University of Oxford, Professor of Computing, and Professorial Fellow of Keble College at the University of Oxford. The hardcover edition does not include a dust jacket.
